General List of Bulbs and Roots

Hyacinths

CULTURAL DIRECTIONS

Planting in the Open Ground. October and November is the proper time, but they can be set out any time as long as the ground is open and the bulbs remain sound. The best compost for their culture is the following: One-third river or sea sand, one-third well-rotted cow manure, and one-third good garden mould. The beds composed of the above compost should be well dug to a depth of fourteen inches, and raised from two to four inches above the level of the walks. The bulbs should be planted evenly about six inches deep (to the bottom of the bulbs), and from five to six inches apart; if planted at uneven depths they will not bloom at the same time, but irregularly. Care must be taken not to press the earth too firmly around and over the bulbs, setting each bulb in a handful of clean sand, which insures drainage.

Directions for Culture in Pots. Select solid, heavy bulbs and plant as early as possible, using a six- or seven-inch pot for a single bulb. Fill the pots with a light, rich potting soil, and have the tops of the bulbs just above the surface; give a good watering and set away in a cool place, covering them with about five inches of sand or coal ashes. In about eight weeks they may be taken to the room in which they are to flower. By bringing in a few pots at a time about two weeks apart a succession of bloom may be had.

Glass Culture. Single Hyacinths do better than double in glasses, as they produce a much larger and more showy truss. Place the bulbs in the glasses, which should be filled with water so it touches the bottom of the bulbs; put them in a closed box in a cool place, or on a shelf in the dark part of the cellar, for from six to eight weeks, changing the water every ten days or two weeks; then remove them to the light. If then placed in a cool room they will produce very fine spikes and remain in bloom a long time. A small piece of charcoal in the water is beneficial.

W. & D.'s Extra Selected Hyacinths

For Bedding and Forcing

These are grown for our trade and must not be confounded with the so-called Mixed Hyacinths sold by some, containing the cullings of the trade, immature, undersized bulbs. For massing in borders or design work, or for forcing, they are well adapted. Our mixture is composed of bulbs which are nearly of the same height and flower simultaneously.

Single Early Tulips

Tulips are ready for delivery in September

Tulips are perhaps the most popular of all Spring-flowering bulbs and are extensively used for forcing and bedding. For growing under glass the cultural directions given for Hyacinths should be followed. For bedding they should be planted 5 to 6 inches apart and 5 inches deep to the bottom of the bulb. The best time for planting is in October and until the ground freezes late in November.

In order to assist our customers in selecting varieties for beds where it will be necessary to plant only sorts that grow about the same height and bloom together we have affixed numbers and letters explained as follows:

1—Extra early. 2—Early. 3—Late.

1 and 2 may be planted together in the open ground, as 2 will flower before 1 is out of bloom. 3 flowers late. The height is indicated by D for dwarf, M for medium and T for tall.

A most brilliant display can be had by placing them in square, diamond, or round-shaped beds, and we shall be pleased to name the varieties most suitable for this purpose if so desired. Double Tulips remain longer in bloom than the single varieties, therefore should not be planted together.

The Darwin Tulip is without a doubt the best of the late flowering class. For beds and borders we confidently recommend the following varieties for their stately bearing and rich colors. They have been specially selected as being distinct, showy and beautiful. These Tulips grow from 24 to 36 inches high, the flowers are borne on strong stiff stems and are resplendent in some of the finest shades known among flowers. The cut flowers form an elegant decoration for vases and last a long time in water. The foliage is extremely robust and accompanies the stem to a height of fully 12 inches, thus lending more charm to the flower when cut. By gentle forcing in pots these grand Tulips may be had in bloom by March and will be found of great value for indoor decoration on account of their lovely soft colors, and tall, stately bearing. Too much cannot be said in favor of this handsome class, and they should find a place in every garden.

Late May-Flowering Hardy Cottage Garden Tulips

These beautiful Tulips have mostly been found growing in old cottage gardens in England, Scotland and Ireland, where they have been in some cases for over fifty years. Among the May-flowering Tulips there are real Gems for cutting and bedding, planting in small groups in the shrubbery and herbaceous border, etc.

Hardy Lilies FOR OUTSIDE PLANTING

Lilies are matchless among hardy plants for beauty of form and variety of color in the garden. They commence flowering in May, and with the various species maintain a continuous and unbroken succession of bloom until Autumn. No class of plants, capable of being cultivated out-of-doors, possesses so many charms; their stately habit, rich and varied colored flowers, often deliciously fragrant, and easy culture, render them so distinct from all other hardy plants that no collection, however select, should be without a few of the choicer sorts.

W. & D.'s Extra Selected Berlin Forcing Lily of the Valley

W. & D.'s Selected Lily of the Valley Pips (Ready for Delivery in November)

The Lily of the Valley is one of the most useful and greatly admired plants grown; the modest bell-shaped flowers of purest white are highly prized for cutting purposes, and for flowering in pots in the Winter they are exceedingly well adapted and will last several weeks in beauty. By taking them in at intervals a succession of flowers may be kept up all Winter. For forcing the pips should always be used, being especially selected for that purpose; they are all extra heavy, 3-year-old crowns and every one can be relied upon to produce at least one, and very often two, well-developed flowers. Plant in flats or pots (about twelve pips in a 6-in. pot) with all the fibrous roots carefully preserved, and keep the crowns above the soil. Place them in a temperature of about 80 degrees, cover the crowns with loose moss, and keep them constantly moist. They should flower in about five weeks.

W. & D.'s Extra Selected Strong Berlin Pips for Early Forcing. This grade of Lily of the Valley we recommend as the very best. The pips are large and plump with plenty of fibrous roots, giving extra strong spikes of bloom with from 12 to 15 large, well-developed bells and strong healthy foliage. This grade has given excellent satisfaction wherever grown. Doz. 40c., 100 $2.50, 1000 $20.00.

Selected Dresden Pips. Like the preceding, this grade is also very carefully selected, pips are heavy and plump, but being grown in a somewhat heavier soil they do not force quite as quickly as the Berlin pips; they are more adapted for second early forcing; excellent quality. Doz. 35c., 100 $2.25, 1000 $18.00.

Cold Storage Lily of the Valley Pips

Lily of the Valley Clumps (Ready about 1st of November)

Are generally used for outdoor planting, and should be placed in a shaded locality, where they can be left permanently. They are the most charming when grown in large patches, in partially shaded localities around the lawn, near the borders of streams, lakes, etc., being perfectly hardy. **Selected Clumps.** Each 30c., doz. $3.00, 100 $20.00.

Freesia

This is one of the most beautiful of all Cape bulbs, possessing a peculiar grace of form, and its fragrance is most delightful, one pot of five or six bulbs being sufficient to perfume a whole house. As cut flowers they are extremely valuable; the unexpanded blooms, opening in water, fill the air with the most delicate perfume, and their endurance is really remarkable. They force very easily, and can be had in flower at Christmas, and continue in succession until June. When potted these should not be placed in a dark place like most other bulbs, but should be put directly in the light.

Tall, graceful, branching, herbaceous perennials, extensively used for forcing, either as cut flowers or in pots. Well-grown plants bear 25 to 40 large plume-like trusses of pure white flowers, enveloping the plant with a feathery foam. Undoubtedly one of the most beautiful and graceful subjects grown for Winter and Spring decoration in the house and conservatory, and highly prized as an Easter plant. They should be potted as soon as received and buried outside until they begin to form roots. They may then be taken in as required. They require an abundance of water.

Spanish Iris

The Spanish Irises flower two weeks before the English and differ from them considerably, the colors of the flowers being showier and more varied. The curious and charming blendings of shades in the same flower give them the appearance of many of our rare Orchids. For vases and bouquets the cut flowers are greatly prized as they last long when cut, and the buds open well in water. They are quite hardy out of doors, requiring only slight mulching in Winter.

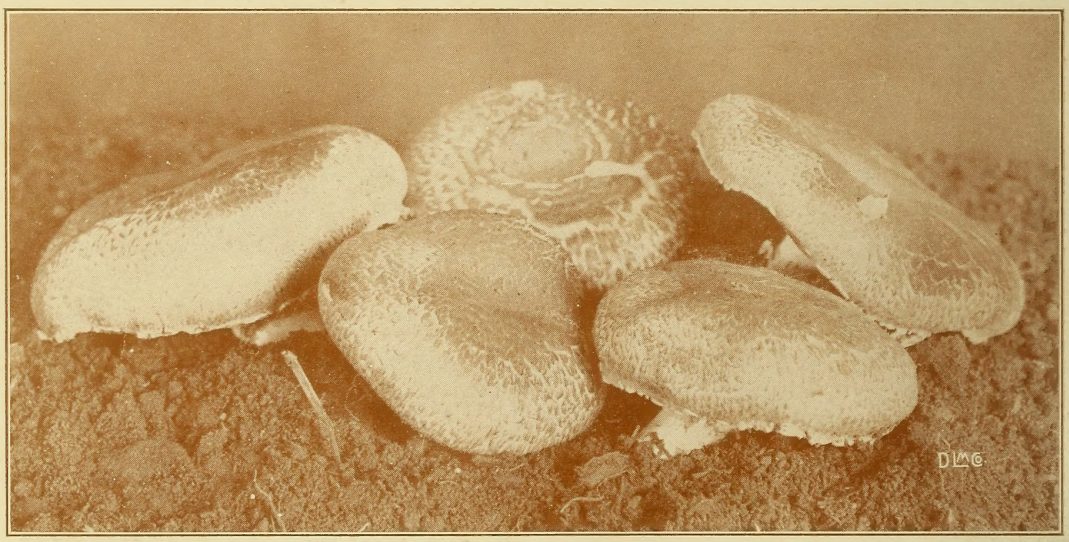
SURE CROP MUSHROOM SPAWN

A FEW DIRECTIONS FOR FORMING MUSHROOM BEDS

The Mushroom is one of the most profitable crops grown, especially in the vicinity of large cities, where the demand, at all seasons, is far in excess of the supply. The best time for making Mushroom beds is in August and September, as in the Fall months the natural heat is sufficient to cause the spawn to germinate freely, and the beds made then ought to bear well before and up to Christmas. Mushrooms can be grown in sheds, cellars, caves, under benches in greenhouses, and in regular Mushroom houses.

In preparing the materials, collect sufficient fresh horse droppings to form the desired size of bed, spreading them out in an airy shed to dry, and turning them frequently. When in a proper state as to dryness, which will soon be learned by experience, make these into a bed from nine inches to one foot thick, beating them firmly together. If the droppings have been properly prepared, gentle fermentation will soon commence, and when the temperature of the bed is from 75° to 80°, with no danger of its rising higher, put in the spawn. This is done by making shallow holes, about nine inches apart, inserting pieces of spawn about the size of a hen's egg, and covering with the dung, pressing this closely about the spawn. It is of the greatest importance that the temperature of the bed should not decline below 75°, nor rise above 80°, for a month after spawning. Within a fortnight after putting in the spawn, cover the bed about two inches thick with good mellow, moist soil, making this firm, and if under this a covering one or two inches thick of cow dung in about the same condition in moisture as the soil, can be afforded, this will cause the bed to last longer, and also to produce a larger crop than if covered with soil only. The most suitable temperature for beds in bearing is 50° to 55°, and as a high temperature causes the Mushrooms to come small, this should be avoided. Watering beds in bearing often causes the small Mushrooms to damp off; therefore water only when the bed ceases to be productive, and then use the water about the same temperature as the bed.



English Mushroom Spawn In bricks, the finest quality. Per lb. 15c., 8 lbs. $1.00, 100 lbs. $12.00.

Pure Culture Mushroom Spawn In bricks, the finest quality. Lb. 20c., 7 lbs. $1.00, 100 lbs. $13.00.

French Mushroom Spawn More bulky than the English. 2-lb. boxes, each 75c., in bulk, 35c. per lb.

ASPARAGUS ROOTS

A saving of one to two years is effected by planting roots

For private use or for marketing on a small scale, beds should be formed five feet wide, with three rows planted in each, one in the middle and one on each side, a foot from the edge; distance between the plants in the rows, nine inches.

Conover's Colossal. Strong 2-year-old roots, $1.00 per 100, $8.00 per 1000.

Conover's Colossal. Strong 3-year-old roots, $1.50 per 100, $12.00 per 1000.

Conover's Colossal. Extra strong 3-year-old roots for forcing, $2.00 per 100, $16.00 per 1000.

Palmetto. Strong 2-year-old roots, $1.25 per 100, $10.00 per 1000.
